Functionalities added/changed

1. Integrated Ollama as an AI Provider

Ollama, which is **local AI provider**, has been integrated alongside **OpenAI** and **Gemini**.
Since it does **not require an API key**, users can simply select **Ollama** and their preferred model in **Settings**.
Once selected, it is saved in the configuration, and you can start chatting with **Buddy AI** immediately.
Buddy AI will respond to prompts just like with other providers.

2. Added `/change` and `/switch` Commands inside the Buddy AI chat window

While chatting with Buddy AI, users can now type **/change** and **/switch** commands if they want to change their current AI provider.

3. API Key Configuration for OpenAI and Gemini

The **API Key** for both **OpenAI** and **Gemini** is now configured **only in Settings**.
Buddy AI will **no longer ask for API keys** during the chat session.

4. Provider Configuration Check

If the user tries to start chatting with **Buddy AI** without configuring any **AI provider** or any **model** in settings
Buddy AI will prompt the user to **configure them first** in the settings before proceeding.
